

# CLAYTURF®

CLAY-COURT PERFORMANCE ALL YEAR ROUND

Charles  
**LAWRENCE**  
SPORTS SURFACES

**Clayturf®** is a revolutionary tennis court surface that achieves the goal of combining clay-court playing characteristics with year-round availability and minimal maintenance requirements. It looks like clay... plays like clay... slides like clay.

For the first time, it makes a clay-type surface a serious proposition even for small clubs. Play takes place on just 2mm depth of graded mineral infill, dyed and furnace-fired to look like clay. Invisible beneath the surface is a dense-pile polypropylene stabilising mat laid over porous macadam, the two providing stability, frost resistance and free drainage. White play-lines are permanently visible.

## MAINTENANCE & RENEWAL

**Routine maintenance:** The normal clay-court etiquette of dragging the court surface and brushing lines after play should be followed. Top up and regulate the mineral infill as necessary. Remove all loose debris. Inspect annually for moss or weed growth.

**Professional maintenance:** Apply moss/weed killer as necessary. Every 5 - 7 years, Rejuvenate the court surface; this patented process replaces the top layer of infill and filtered dirt, restoring porosity, appearance and playing characteristics.

## FEATURES & BENEFITS

**Authentic clay-court bounce** strongly favoured by the Lawn Tennis Association.

**Controlled slide like clay** - but with better foot traction.

Needs **minimal maintenance** and no expensive watering systems.

**Free-draining and frost-proof** - playable year round with no rebuild each spring.

**No fine dust** to blow in the wind, inhibit drainage or strain shoes and clothing.

An **authentic clay-court red colour**, with bright white lines.
