SPORTS SURFACES

THOLON GRASS
Innovative action

Grasshopper® Garros sand-dressed synthetic grass provides high performance at a very competitive price. With this style of surface, play takes place on the short, ultra-dense pile of the carpet itself, producing a true, slow bounce especially favoured by stronger club players.

Grasshopper® Garros is an ultra-dense carpet surface made with Tholon® yarn. It has a 10mm pile length with no fewer than 56,500 stitches/m², which produces a very uniform, responsive court with a positive feel underfoot. A relatively small amount of sand at the base of the pile provides a stabilising ballast and draws down moisture from the playing surface.

As with other Grasshopper® surfaces, the base is open-textured macadam.

MAINTENANCE & RENEWAL

Routine maintenance: Remove all loose debris. Brush regularly to redistribute sand and prevent compaction. Inspect annually for growth of moss or weeds.

Professional maintenance: Power groom every few months; contra-brush every 1 - 2 years; apply moss / weedkiller as necessary. After 5 - 7 years, Rejuvenate the court: this patented process removes dirt filtered out by the carpet and sand, restoring porosity, appearance and playing characteristics. After typically 10 or more years, renew the carpet on the existing porous base.

FEATURES & BENEFITS

Consistent playing characteristics responding well to spin - ideal for coaching, competition or social tennis.

Positive feel allows **confident movement** around the court.

Shock-absorbing carpet reduces fatigue and increases comfort.

Porous construction drains freely in wet weather.

Even lower maintenance than sand-filled systems saves on running costs.

Permanent play lines need no attention.
