

### STRUCTURE AND CHARACTERISTICS

**Gymsol®** is a hard-wearing and highly versatile polymeric system which can be laid on most existing floors (concrete, asphalt or timber) in indoor sports halls. It provides a continuous, resilient multi-purpose surface suitable for many different sports and a wide range of other indoor activities.

A prefabricated shred-rubber shockpad is bonded to the existing floor and sealed with resin. A self-levelling flow coat of through-coloured polyurethane is then applied, followed by a final textured coat which produces a matt, seamless, slip-resistant surface. Line markings in a similar polyurethane material are painted on as required.

The shock-absorbing characteristics of the cushioned structure reduce injuries and increase player comfort. Thickness and construction can be varied to some extent to suit the expected range of activities.

# GYMSOL® POLYURETHANE INDOOR SPORTS SURFACES

## THE RANGE OF ACTIVITIES

Gymsol® provides a comfortable, safe surface suitable for a very wide variety of indoor activities, including:

Aerobics	Five-a-side football	Movement & dance
Badminton	Gymnastics	Netball
Basketball	Handball	Table tennis
Fencing	Hockey	Tennis
Fitness training	Martial arts	Volleyball

## COLOURS AND LINE MARKINGS

There is a wide choice of colours for both the surface itself and the line markings for different sports. Extra lines can be added at any time.

## MAINTENANCE & RENEWAL

**Routine maintenance:** Sweep, vacuum or damp mop. Remove chewing gum immediately. Wash periodically with recommended detergent.

**Professional maintenance:** Specialist cleaning and local repair as necessary. Ultimately the flow-coat structure allows complete resurfacing at a low cost.

## FEATURES & BENEFITS

A **versatile surface** suitable for most sports and activities.

Cushioned, shock-absorbing structure **reduces fatigue and minimises injury risks.**

Textured non-reflective surface gives **excellent traction and grip.**

Sound-dampening, fire-resistant and **impervious** to water, oils and body fluids.

Long life and low maintenance **maximise financial payback.**
