

TENNITOP® ACE

CUSHIONED POLYMERIC

Charles
LAWRENCE
SPORTS SURFACES

Tennitop® Ace has been developed to provide a slow playing surface that is ideal for coaching and for enjoyable social or competitive tennis. The polymeric surface offers advantages of porosity, superior comfort and great consistency of bounce.

Tennitop® Ace consists of a continuous 10mm layer of porous rubber laid over a porous macadam base and finished with a non-slip polymeric spray coat system. Being both predictable in its bounce and responsive to spin, it encourages the development of well-grooved shots and rewards good tactics. The rubber layer protects the underlying macadam almost indefinitely.

MAINTENANCE & RENEWAL

Routine maintenance: Remove all loose debris. Inspect annually for growth of moss or weeds and to check condition.

Professional maintenance: Apply moss/ weedkiller as necessary. Every 1 - 2 years, pressure-wash the surface to remove dirt, restore colour and maintain porosity. After typically 4 - 6 years, respray the heavy wear areas with the finish coat system.

FEATURES & BENEFITS

Highly consistent slow playing characteristics favoured by the LTA for coaching.

Porous construction and **excellent foot grip** allow play in dry or wet conditions.

Cushioned resilient surface for increased player comfort.

Two-colour options give even better visibility.

Heavy wear areas can be restored inexpensively.
